                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:ABA02182 + /SIDS1/gcgdata/geneseq/geneseqn-embl/NA2000.DAT:AAA30623 + /SIDS1/gcgdata/geneseq/geneseqn-embl/NA2000.DAT:AAA30726 + /SIDS1/gcgdata/geneseq/geneseqn-embl/NA2000.DAT:AAA39739 + /SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001B.DAT:ABI98027 +
                                                 involved in thrombin-mediated activation of platelets and other haematopoletic cells. It is used for screening novel thrombin agonists or antagonists. The agonists are used as therapeutics to treat wounds, promote clotting and as reagents to activate platelets in diagnostic tests. Antagonists are used to control blood coagulation, treat heart attacks and strokes, and block inflammatory and proliferative responses that occur in normal wound healing and variety of diseases including atheroscierosis, restenosis, pulmonary inflammation (ARDS) and
                                    glomerulosclerosis
                                                                                                                                                                                                 receptor 4 (PAR4) which is a thrombin receptor expressed on cell surface. PAR4 is activated by thrombin and mediates signalling events e.g. phosphoinositide hydrolysis, calcium efflux and platelet aggregation. The receptor is highly expressed in spleen cells and likely to be
                                                                                                                                                                                                                                                                                                                Claim 3;

cancers and respiratory obstructions -Low adenosine (A) content antisense oligonucleotides which trigger adenosine receptors during metabolism, useful e.g. ď for treating not

Disclosure; Page 1415; 1592pp; English.

Clung/respiratory disorders and malignancies, such as stimulating and cc activating peptide factors and transmitters, transcription factors, climmunoglobulins and antibodies, antibody receptors, cytokines and cc hamokines, endogenously produced specific and non-specific enzymes, commonkines, endogenously produced specific and their receptors, cytokines and cc hemokine receptors, adhesion molecules and their receptors, cytokine and cc nervous system (CNS) and peripheral nervous and non-nervous system and creceptors, CNS and peripheral nervous and non-nervous system cc receptors, CNS and peripheral nervous and non-nervous system entral creceptors, compounded to the compound of th immunosuppressive, antiasthmatic, hypotensive and cytostatic activities The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification o hypertension, emphysema, chronic obstructive pulmonary disease (COPD), can have respiratory, present invention. bronchodilator, antiinflammatory, analgesic, exemplification of

                                                                                                                                                                                                                                                                                         asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of
                                                             nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA33923 to AAA3392) are specifically claimed ONS from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequence
                                                                                                                                                                                                                      the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
                                                                                                                                                                                                                                                                                                                                                                                                                             useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, and analysic activities. The compositions are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

                                                                                                                                                                                     cc (PARs) are a subfamily of G protein coupled receptors which are capable of mediating cellular signalling in response to proteases (e.g., classes). They are characterised by a tethered peptide ligand at the cc extracellular N-terminus that is generated by proteolysis. PAR4 is cativated by thrombin or trypsin cleavage at Ry47/Gly48, which generates a new N-terminus corresponding to the tethered ligand (a hexapeptide). Cc Agonists of PAR4 are useful for upregulating cellular or physiological cresponses whereas antagonists are used to downregulate these cc activities. The PAR4 protein is further useful for dissecting the effects of thrombin or other activating proteases in the clotting capathway from the effects of these proteases at the cellular level. Cc Agonists are specifically useful in promoting the proliferation and/or differentiation of platelets, in mediating inflammatory events, cresponses to vascular injury, chemotaxis or mitogenesis, and in cc producing growth factors. Antagonists are useful as research reagents or characterising sites of ligand-receptor interaction.

The antisense molecules antibodies of PAR protein are also used to treat disorders associated with implantation of placenta. The present sequence is a human PAR-4 DNA used for producing antisense molecules for treating invasive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating metastatic tumor cells useful for treating disorders in placenta implantation in a female comprises administration of an antisense molecule complementary to an RNA sequence of a proteas activated receptor protein -

Pep derived from, or based on, the N-terminal of activated PAR4 (see AAB47624-77), are capable of stimulating PAR4. These peptides may used to activate PAR4 at lower concentrations than wild type PAR4. These peptides may be used to stimulate platelet aggregation, and inhibiting tumor cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              416 CCCACCAGG.....CTGGTGCCCGCCCTCTATGGGCTGGTCCTGGTGGT

immunosuppressive; ar
immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. CC The antisense oligonucleotides and (I) can be used to down-regulate the CC expression and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and CC activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and CC chemokines, endogenously produced specific and non-specific enzymes, CC binding proteins, adhesion molecules and their receptors, cytokine and CC chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system creeptors, defensins, growth factors, vascactive peptides and CC receptors, binding proteins and malignancy associated proteins. The CC cantisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or lung inflammation, allergy(ies) CC and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, pulmonary implementation, palargy distress syndrome CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq_name: /SIDS1/gcgdata/geneseq/geneseqn-emb1/NA2000.DAT:AAF21433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Low adenosine (A) content antisense oligonucleotides which do trigger adenosine receptors during metabolism, useful e.g. for cancers and respiratory obstructions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Low adenosine antisense oligonucleotide; phosphorothioate; allergy; human; alrway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammatory; immunosuppressive; antiasthmatic; analyses; hypotensive; cytostatio;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; adenosine receptor; low adenosine antisense oligonucleotide; phosphorothioate; impaired respiration; inflammation; allergy; allergic disease; bronchoconstriction; inhibitor; antiinflammatory; antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction: asthm
                                                                                                                                                                                                                                                                             inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONS reduces side effects. The Activities adapted to proper the containing ONS break down with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAA35311 standard;
                                                                                                                                                              release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-AUG-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-AUG-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WO200009525-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cancer; leukaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             lung disease; ischaemic condition; pulmonary vasoconstriction; asthma;
respiratory distress syndrome; pain; cystic fibrosis; emphysema;
pulmonary hypertension; chronic obstructive pulmonary disease; COPD;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28-JUL-2000
                                          invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequence given in the sequence listing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 1331-1333; 1343pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2000-205971/18.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24-FEB-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               expression (claimed). It is also useful for identifying compounds that stimulate or inhibit GPR25, by measuring binding of the candidate to GPR25, and analysing signal of GPR25 (claimed). Expression is vivo is useful in gene therapy for treatment of disease. Diseases that can be treated or diagnosed include fungal, protozoal and viral (e.g. HIV) infections, pain, cancer, diabetes, obesity, anorexia, bulimia, asthma, Parkinson's disease; acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcer, allergy, benign prostatic hypertrophy, migraine, vomiting, anxiety, schizophrenia, manic depression, delirium, dementia, municipal and prostation of the prostation of the prostation of the prostation of the prostation, stroke, anxiety, schizophrenia, manic depression, delirium, dementia, manic depression, delirium, delirium, delirium, delirium, delirium, delirium, delirium, delirium, delirium, delirium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of GPR25 comprises administering an antagonist of GPR25, a nucleic acid that inhibits expression of GPR25, or a polypeptide that competes with GPR25 for its ligand, substrate or receptor. Also claimed are an expression system, host cells, a membrane of the host cells and preparation of GPR25. GPR25 is useful for diagnosing and treatment of a disease or susceptibility to a disease by determining the presence or absence of a mutation in GPR25 nucleic acid, and/or analysing for the presence or amount of GPR25 revorcession (flaimed) It is also useful for identifying compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This is the nucleotide sequence of an isolated polynucleotide encoding a novel human G protein coupled receptor termed GPR25 (see AAY31751). The polynucleotide can be obtained from a cDNA library derived from mRNA in cells of human spleen using expressed sequence tag analysis. Treatment of a subject in need of GPR25 comprises administering GPR25, or a polynucleotide encoding a polypeptide that effects production of GPR25 in vivo, while treatment of a subject in need of inhibiting activity or expression treatment of a subject in need of inhibiting activity or expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New messenger polypeptides and poylnucleotides useful for diagnosis, prevention and treatment of cancer and HIV infection - and host cells and antibodies  \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left(

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         receptor is an orphan seven transmembrane domain receptor that has been found to function as an efficient coreceptor for cellular infection by a number of HTV-1 and SIV strains. The entry of HTV into cells involves binding of the viral envelope protein (env) to CD4, followed by a conformational change in env that mediates fusion between the viral conformational change in env that mediates fusion between the viral membrane and the host cell membrane. The invention relates to recombinant envaryotic cells transformed with a nuclectide encoding an APJ protein and/or a nuclectide encoding the CD4 protein, such that the cells coexpress APJ and CD4. It also encompasses peptides and antibodies which specifically bind to an extracellular domain of APJ. These inhibit mediates fusion between a cell coexpressing the APJ and CD4 proteins and a cell expressing an HIV envariance the APJ/CD4-expressing cell. The new recombinant cells provide an important tool for investigating and controlling HIV infection. The cells
                                                                                                                      Align seg 1/1
                                                                                                                                                                                                                Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                         can be used to identify compounds that modulate interaction between HIV and an APJ receptor, which may be useful in the development of anti-HIV drugs. Contacting cells expressing APJ and CD4 with an APJ binding/blocking agent (e.g., the antibodies or peptides) may be useful to inhibit HIV infection of such cells, e.g., to treat subjects having an HIV-related disorder associated with APJ expression. Antibodies and peptide fragments can be included in medicines and administered to treat patients (especially foetuses) having, or at risk of developing, an HIV infection or related disorder. The antibodies can also be used detect cells expressing the APJ receptor, and are useful to diagnose susceptibility to HIV infection. For example, higher APJ levels in
                                                                                                                                                                                                                                                                                                                                                       neuropathogenesis associated with HIV infection. Transgenic animals which express human CD4 and APJ proteins may provide model systems for the study of HIV infection and for anti-HIV drug development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New recombinant eukaryotic cells coexpressing APJ and CD4 polypeptides, useful for identifying compounds that modulate interaction between an HIV virus and an APJ receptor e.g. to develop anti-HIV drugs \, -

The protein is involved in the transition of chondrocytes from proliferation to hypertrophy. The product can be used for identifying the occurrence of proliferation or hypertrophy or the transition of chondrocytes from proliferation to hypertrophy in a tissue sample. It can also be used for preventing chondrocytes from transitioning from proliferation to hypertrophy and for inhibiting arthritic progression of articular chondrocytes in a patient. It can also be used for inducing chondrocytes to transition from proliferation to hypertrophy and for treating non-union bone defects.

                                                The sequence is that encoding a protein which is selectively expressed in chondrocytes in lower proliferative or upper hypertrophic zones of long bone and embryonic vertebrae growth plates. The protein is involved in the transition of chondrocytes from proliferation to hypertrophy. The product can be used for identifying the occurrence of proliferation or hypertrophy in a tissue sample. It can also be used for preventing chondrocytes from transitioning from proliferation to hypertrophy and for inhibiting arthritic progression of articular chondrocytes to transition from proliferation to hypertrophy and for inhibiting arthritic progression of articular chondrocytes to transition from proliferation to hypertrophy and for inhibiting arthritic progression of articular chondrocytes to transition from proliferation to
                                                                                                                                                                                                                                                                                                                               New isolated chondrocyte protein - which is involved in the transition of chondrocytes from proliferation to hypertrophy, used to develop products for diagnosis and therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chondrocyte; transition;; proliferation; hypertrophy; diagnosis;

The protein is involved in the transition of chondrocytes from proliferation to hypertrophy. The product can be used for identifying the occurrence of proliferation or hypertrophy or the transition of chondrocytes from proliferation to hypertrophy in a tissue sample. It can also be used for preventing chondrocytes from transitioning from proliferation preventing chondrocytes from transitioning from proliferation
                                                                                                                                                                                                                                                                                          343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               to hypertrophy and for inhibiting arthritic progression of articular chondrocytes in a patient. It can also be used for inducing chondrocytes to transition from proliferation to hypertrophy and for treating non-union bone defects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated chondrocyte protein - which is involved in the transition of chondrocytes from proliferation to hypertroph to develop products for diagnosis and therapy

                                                                                                                                                                                                                                                                                                                    The sequence is that encoding a protein which is selectively expressed in chondrocytes in lower proliferative or upper hypertrophic zones of long bone and embryonic vertebrae growth plates. The protein is involved in the transition of chondrocytes from proliferation to hypertrophy. The product can be used for identifying the occurrence of proliferation or hypertrophy or the transition of chondrocytes from proliferation to hypertrophy or the transition of chondrocytes from proliferation to hypertrophy and for inhibiting arthritic progression of articular chondrocytes in a patient. It can also be used for inducing chondrocytes in a patient. It can also be used for articular chondrocytes to transition from proliferation to hypertrophy and for inhibiting arthritic progression of articular chondrocytes to transition from proliferation to hypertrophy and for treating non-union bone defects.

The sequence is that encoding a protein which is selectively expressed in chondrocytes in lower proliferative or upper hypertrophic zones of long bone and embryonic vertebrae growth plates. The protein is involved in the transition of chondrocytes from proliferation to hypertrophy. The product

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             can be used for identifying the occurrence of proliferation or hypertrophy or the transition of chondrocytes from proliferation to hypertrophy in a tissue sample. It can also be used for preventing chondrocytes from transitioning from proliferation to hypertrophy and for inhibiting arthritic progression of articular chondrocytes in a patient. It can also be used for inducing chondrocytes to transition from proliferation to hypertrophy and for treating non-union bone defects.
